

Global Self Drive is continually evaluating its commitment to lessen the impact of its business on the environment. As a result an Environmental Policy has been introduced across the Group.

- ✓ We are committed to increasing the number of 'Cleaner Fuel' vehicles on our fleet and over 15% of our fleet now comprises hybrid cars and cars with significantly reduced CO₂ emissions. We are working with our vehicle suppliers to introduce hybrid commercial vehicles onto the fleet.
- ✓ Every Global Self Drive branch recycles waste paper and cardboard, aluminium cans and, where facilities are available, plastic bottles and packaging.
- ✓ All waste oil products are recycled through our supplier network.
- ✓ We are committed to converting all branches to lower electricity consumption through ensuring all computers, kitchen appliances, lights and heaters are switched off when not in use.
- ✓ All branches will convert to using low energy light bulbs.
- ✓ Each branch will be fitted with a cleaning chemical dispenser. This will ensure the chemicals are specifically measured to lessen their environmental impact without detracting from the standard of cleanliness that we offer.
- ✓ We actively encourage each staff member to work, where possible, in a paperless environment.
